# PassagePoint™ Directory Link Add-On

Secure, Real-Time Link to Multiple Host Directories

PassagePoint's new Directory Link Add-On provides the fastest, most efficient way to link our industry-leading visitor management solution to any ODBC or LDAP directory system. No other visitor management software is more comprehensive, configurable, easier to use, or integrates with more major access control systems. It's the perfect solution for multi-tenant buildings or corporate campuses that need to link lobby security with central databases or access control systems.

Improved, Real-Time Security

With PassagePoint Directory Link Add-On, updating records is instantaneous and ongoing. Every time a visitor registers, the system automatically verifies host information against the appropriate directory to make sure that access levels are authorized and current. These real-time updates improve security and protect buildings and clients against unwanted or unknown visitors, terminated employees, and the like.

PassagePoint Directory Link Add-On displays results from a comprehensive search of directories

Key Features

- Centralized management with real-time database access
- Ability to limit information through directory filters
- Direct batch synchronization eliminates need for text files
- Record keeping and pinpoint search capabilities
- Runs invisibly within PassagePoint with no change in user experience for lobby staff or visitors
- Configurable and integrates with variety of databases (HR, LDAP, Access Control, etc.)

Added Security Benefits

- Greater accuracy in registering and badging visitors
- Protection against unwanted visitors or employees/vendors with terminated access
- Real-time access to latest directory information

System Requirements

- Pentium 4 or equivalent
- Windows 2000, XP, 2003
- 512 MB RAM minimum; 1 GB RAM recommended
- 1 GB of free hard disk space
