

# High Resolution UV Printing

See Yourself (*and Your Staff*) in a Different Light!

- **Amazing Quality** - 256 shades of UV generate realistic skin tones and high density graphics
- **Global Security** - Unique machine tracking code prints automatically to prevent counterfeiting
- **Truly Covert** - Completely invisible to the naked eye
- **Cost Saving** - Inexpensive compared to custom holographic laminates

## Real Security available only for **EDISecure**® Retransfer Printers

Digital Identification Solutions introduces its brand new gradient UV dye ribbons for use with the **EDISecure**® XID 580ie and 590ie Professional Line Retransfer Card Printers. This new ribbon gives you beyond the industry average, it gives you the ability to print 256-scale gradient static or variable images and data directly on the card. This allows you to add true tonal values for logos and real skin tones to photographs for better identification than standard binary (black/white) monochrome UV ink ribbons.

The new rolls allow you to create 750 double-side custom UV cards per roll (with K-Resin black only printing on the back), or 375 full color double-side UV cards. You can easily create ultraviolet layout images directly with the XID 5xxie printer driver, or through your current ID software (even MS Word). Additional UV printing features will soon be available exclusively through our own Card Management Software (CMS) applications.

Now, there is an even better reason: **Real Security**. In every UV dye print by our XID 5xxie printers, a unique machine code from each printer is automatically printed on each card. This allows you to track every single card issued by your agency to verify its authenticity. Even if one of your cards is printed in ultraviolet dye on a different XID 5xxie printer, you can instantly tell if the machine code differs from the printers that you own. The code cannot be removed and cannot be altered either. Now that is real security, not just a "cool feature".

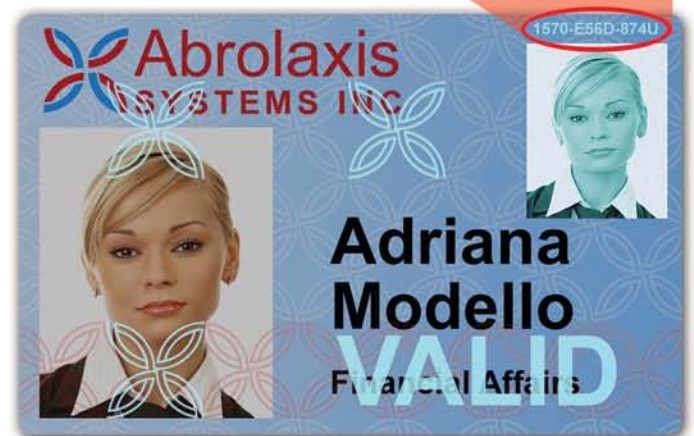

Remember, high resolution gradient UV printing is much more cost-effective than custom holographic laminate, and doesn't require additional hardware. Contact us today to learn more or to request samples!
