

# QUANTUM

## THE CENTRALIZED CARD PRODUCTION SYSTEM

The Quantum printer is the solution for printing and encoding cards in large volumes. It personalizes the cards front and back, in color or monochrome, with a record printing speed.

Quantum combines the feel of a desktop printer with the power of an industrial printer for centralized production of plastic cards in large quantities.

### INCREASED PRODUCTIVITY

- With a feed tray and stacker capacity of 500 cards each, the Quantum printer can deliver more than 1000 cards per hour in monochrome and 150 cards in color.
- Thanks to reversible encoding module (magnetic stripes, contact smart cards and contactless cards) independent from the print module, the cards are encoded and printed in a single pass.

### ENHANCED VERSATILITY

- Quantum has been designed to be personalized on-site, directly by the user. For instance, you can add or reverse an encoder very easily and quickly.
- The card production system adapts to your evolutive needs: single or dual sided printing, diverse encoding modules, printing options and plastic card types available.

### ECONOMIC SOLUTION

- Quantum can handle large volumes of cards with very high print quality, providing a very economical alternative to industrial card printers.
- You can control your costs and produce your cards yourself instead of having to go to an outside provider.
