Centralized ID Card Printing Solutions

Management from one location...

Enabling you to streamline your card personalization processes from one central location, CardExchange® SBS creates a simplified way to manage all your cards by making it easier than ever for the people in your organization to share information. Our License Manager simplifies deploying, configuring, and managing all CardExchange® clients from one central location. It's one place where you control everything: You can create profiles to set up user accounts for card creation, database records, printing; configure systems settings; client license management; enforce restrictions; set password policies; and more. Efficient, simple, and adaptable for every user need.

All your data at one location

Make life easy...

CardExchange® SBS stores all your card layouts, database connections, and printer settings in one location making them available for all your users. No need to have multiple copies at every location. With a click of a button your users can see up-to-the-minute cards created and ensure a streamlined use companywide. Changes and additions can be made easily available from one location. With centralized data you can rest easy knowing everything you create is protected with your normal backup schedule. No extra effort is needed.

Printing done your way

Local or centralized printing...

Whether you print to a local computer or you print to a farm of printers at one central location, CardExchange® SBS gives you control of your print jobs. Users can print to a local computer with ease direct from their CardExchange® program. Large print jobs with multiple printers are simplified with use of our CardExchange® Print Dispatcher which enables you to manage multiple printers from one location; create load balancing of print jobs; redirect print jobs if there is a printer problem to another printer; confirmation of completed print job; encoding card management; and more. No more slowing down your system with large print jobs, CardExchange® Print Dispatcher pools and manages all the print jobs in one location freeing up your programs to move to the next task.

Control your users

Your show. Your way...

CardExchange® SBS allows for a designated Administrator to control what each user can see and do. You can control permissions of groups or individual users from one central location. Controlling user groups allow you to set policies for specific departments, locations, regions; controlling individual users allow you to set policies that are unique to that users function in the card printing process. Administrators can make a customized interface for each user and department and further simplifying the card production process and management.

It's not just about software; it's about the experience!
